

Cattledata is designed to ease the task of recording events that happen in your Cattle enterprise. It will produce the information you need for your records.

It will also link to selected external recording systems such as EID readers, weigh-heads and hand-held recording devices.

Getting Started

Setting up and getting started could not be easier.

Cattledata comes with the facility to download your cattle from BCMS. You can be up and running in minutes.

Cattledata. Import from BCMS: Manor Farm	<u></u> 9	×
This routine can be used to import the animals that are currently on your holding from BCMS. If you choose the to use the CTSOnline method then you will need to obtain the "Cattle on Holding Summary and Download" file from the BCMS Web Site first.		
O Using CTS Web Services: Last Download: 01/01/1980 ✓ Update		
Using the 'Cattle on Holding Summary and Download' file downloaded from CTSOnline: File Name: Browse		
<u>S</u> tart E <u>xi</u> t <u>H</u> elp		

Two options are available.

- 1 Use BCMS Webservice. Communicates direct with BCMS Servers. You will need to get a User ID and Password from BCMS for this. It is however the best form of communication for passport application and movement recording.
- 2 Use a file generated on and downloaded from the CTS website.

Both of these options are described in the Cattledata Quickstart Guide.

The records it keeps

Detailed Records:

Individual animal records for Cows, Calves and Bulls - both live and dead.
Easy to read records may maintained on each animal.
An individual animal's record can be as simple as its management tag, official tag, sex, breed, date of birth and movements.
It can be extended to include parentage, purchase price and life records of health, services, pd's, calving and weighing.
Scottish Beef Calf Scheme
(Scottish Version Only)
Eligibility and reports are available. Files for import into SG Rural Payments Online are created.
Health Records
A Life record of all

A Life record of all
treatments can be kept

Includes date, reason, drug, dosage, batch no., expiry, withdrawal periods, who did it and any comment.

Bull Performance can also be monitored through the service / calving records

This gives a complete picture of any animal's performance.

Occurrences

Animal records are generally updated by entering occurrences.

Occurrences can be entered directly into the system by typing the detail in the appropriate section.

They can also, in many cases, be entered from data recorded on EID tag readers.

In the occurrence Type gives the following options.

Type:	Location N	Include:	Home Fa	Home Farm		
Ear N	All Group	orn S	ex	Breed	Officia	L Tag
00029		09/08 F	emale	SMX	UK643058	300029
	Location	03/09 F	emale	SMX	UK643058	200063
00089	Reader	10/09 F	emale	SMX	UK643058	3700089

All - Select from all the animals in the records.

Group – Where Management Groups are active use the include option to filter to a particular group.

Import - Lets you import numbers from a file generated from another system.

- Location Select from the animals in a specific location within the herd.
- Reader Select from the animal numbers downloaded from reader. In location you may also select from a group recorded on the reader.

Calving

This is entered by selecting the dam from the list. Enter the date of calving. The sire will be selected from the service record of the dam or, if incorrect, can be selected from the list of sires. Calving Score can be selected. The number of calves is entered in the Total box and the next available tag numbers are displayed. These can be changed if necessary. Sex of calves should also be selected. Name and birth Weight may also be entered.

BCMS Registrations

After calvings have been entered passport applications can be done through the BCMS section. Set the date range for the births you wish to register. Select the calves and click send.

The file of data is created for transmission. Highlight it and click Submit and it is sent.

Wait a few second, highlight it again and resubmit it to get the results.

Purchases

This can be the biggest task if substantial numbers are purchased. Each animal has to have its details accurately entered. Using a barcode scanner eliminates error and speeds the entry. Enter the general detail in the top section. Place the cursor in the Scan ID box. Read the Barcodes on the bottom of the passport. Birth date, Sex, Breed and tag numbers are filled in for each animal. When all the animals in the batch are entered click save.

Group Recording

Whilst occurrences can be recorded against individual animals group recording can speed up the process. Typically health treatments can be done on a group basis. Enter the detail in the top section. In the animals select Group and Location. If all the animals were treated click Select. Any untreated can be clicked off. Click Save and all selected animals have the treatment applied.

Kill Information

Detail of final out-turn can be recorded after the sale. This can be imported from a file. This completes the record of the animal. Analysis of the sale returns can then be done by breed, sire, dam, date etc. Files of kill data supplied by the slaughter house can be imported to speed up the entry.

EID Module

A Selection of EID readers can be used to record and transfer data. Those shown below are a few of those we have available.

"Stick" Readers are used to simply record the numbers from animals. These lists can be downloaded back to Cattledata and used in occurrences such as purchases and sales.

Tru-test XRS2

Agrident AWR300

Data-loggers are more sophisticated devices which can be pre-loaded with animal data and occurrences. Weighings, health treatments, services, scannings and lambings are a few examples of what can be recorded. These actions can then be transferred back to the program on your PC.

Agrident APR600

Barcode Scanner

Barcode Scanner can be used for quick accurate entry of Purchases from passport barcode. Sales animals can also be selected from passports.

Cattledata App Module

The Cattledata App Module lets you load a version of the program onto your phone or tablet.

This allows you to look up live animal records, record occurrences and synchronise these back to the mater program on your PC.
